INRIA, the French leading research institute in the field of information and communication science and technology, is offering young scientists with a Master’s degree in computer science, automatic control or scientific computing, the opportunity to prepare a PhD in its research teams. More than 70 PhD topics are available, related to communicating, cognitive, symbolic, numerical and biological systems.

Priority will be given to candidates with a mobility background and to topics pertaining to the institute’s prioritized themes. The recruitment campaign will end on May 4, 2009.
