The Office of Science and Technology of the Consulate of France in Chicago together with Purdue University and the Institut Agronomique Méditerranéen de Montpellier (I.A.M.M.) and the Institut National Polytechnique de Toulouse (I.N.P.T.) is co-organizing the second edition of the French American Agriculture Symposium (F.A.A.S.). This year’s event was entitled « Developing Partnerships for Sustainable Water management and Agriculture in the context of Climate and Global change ». Held in Montpellier, it brought together nearly 60 experts from the United States, France, and the international scientific community.

This meeting is the follow-up to the first symposium organized in 2010 at Purdue University, the object of which was to have participants come up with joint propositions of actions to take concerning the responsible global management of water resources.

The meeting in Montpellier focused on the presentation of joint French-American initiatives with an objective to construction plans of action with financial partners and other donors.
