The second Berkeley-Inria-Stanford Workshop (BIS’12) will be hosted by Inria (French National Institute for Research in Computer Science & Control) in Paris on May 21-22. It is co-organized by UC Berkeley, Inria, and Stanford University, in partnership with CITRIS (Center for Information Technology Research in the Interest of Society) and the French Ministry of Foreign Affairs. The objectives of this workshop are two-fold: first, to present the current state of scientific collaborations and second to work on proposals for future ambitious joint projects.

BIS’12 is part of the joint research program Inria@SiliconValley which works to promote and develop scientific collaborations between Inria project-teams and American teams in these two universities and affiliated research institutions in California. This program supports joint research projects through seed funding, fellowships and scholarships for faculty, postdocs and graduate students. This program began in January 2011.
