The French National Institute for Agricultural Research (INRA) is bringing 41 research scientists on board in 2013 to reinforce existing teams. Applications are open until Thursday February 28, 2013.

INRA research scientists, from diverse specialities, base their work on laboratory and field activities. They strive towards excellence to discover and develop concrete solutions that benefit society. At INRA, personal research and team-led projects go hand in hand to further expertise and innovation for sustainable production, to protect the environment and to improve human nutrition.

Recruitment focuses on a wide range of disciplines, including: agronomy and economy of landscapes, the ecology of communities, invertebrates, economics, economics of animal health, quantitative genetics and genomics, process engineering, physics and chemistry of soils, mathematics and modelling, modelling in cell biology and biology of organisms, nutrition and physiology, veterinary sciences and immunology, sociology and organisation sciences.
