

## FACCTS: 2018 Call for proposals

Published on Tuesday October 3, 2017

View online : <https://www.france-science.org/FACCTS-2018-Call-for-proposals.html>

The **France And Chicago Collaborating in The Sciences** (FACCTS) program is designed to enhance science at the University of Chicago by encouraging closer relations between researchers in the Physical Sciences Division (PSD), the Biological Sciences Division (BSD) and the Institute for Molecular Engineering (IME) and high-level research teams and institutions of higher education in France. It seeks to accomplish this goal by offering seed funding for new projects that promote meaningful academic and scientific exchange, and that show promise of leading to fruitful and sustainable collaboration. Through a partnership with Argonne National Laboratory and Fermilab, researchers at these two national laboratories are also eligible for FACCTS support, and are encouraged to apply

### Eligibility

Invited to apply are all PI-eligible University of Chicago faculty members and researchers affiliated with PSD, BSD and/or IME, as well as PI-eligible researchers at Argonne National Laboratory and Fermilab.

### Selection Criteria

Excellent, important science is necessary for a successful proposal, but not sufficient. The committee will also consider such other factors including:

- The strengths and levels of complementarity between the collaborating partner laboratories
- The likelihood of a high reward relative to the amount of funding requested
- The potential for continued collaboration in the medium and long term

The FACCTS program seeks to help foster a broad range of networks and productive partnerships between Chicago-based research with French colleagues and institutions. For this reason, when choosing between similarly ranked projects, the committee may use “past FACCTS funding” as a secondary criterion, giving preference to first-time applicants and to individuals whose initiatives have not recently (within the last 2 years) received FACCTS support.

### Deadlines and Key Dates

- **October 16, 2017: Deadline for Argonne-based researchers to submit preproposal**
- November 1, 2017: Responses sent to all Argonne-based researchers who submitted pre-proposals. (Up to five Argonne-based researchers will be invited to submit a full application.)
- **December 4, 2017: Deadline for FACCTS proposals from UChicago, Fermilab, and Argonne National Laboratory applicants**
- February 28, 2018: Notification given to all applicants
- March 31, 2018: Funds become available to award recipients

## One Program, Three Pools

FACCTS applications from PI-eligible researchers affiliated with the University of Chicago constitute one applicant pool. Proposals from this pool will be competing for funding totaling \$150,000.

Applications submitted by researchers from Argonne National Laboratory and Fermilab will constitute a second and third pool. These applications will be evaluated by the FACCTS committee against applications in their respective pools, and ratings and recommendations will be forwarded to the offices of the directors of the appropriate national laboratory, which will be responsible for final award decisions. Successful national laboratory FACCTS proposals will be funded internally at different levels: \$20,000/year for up to two years for the Argonne FACCTS recipient, and up to a total of \$15,000 for the Fermilab FACCTS recipient.

### Funding Parameters

Funding parameters for ANL and Fermilab researchers are described in the previous section. In the UChicago pool, most one-year awards are in amounts between \$5,000 and \$15,000. Most two-year awards are in the \$10,000 to \$25,000 range. While these funding levels are relatively modest when compared to those offered by most state and federal agencies, FACCTS funds are significantly more flexible, and may be used for nearly any purpose that the University's (or national laboratory's) accounting system allows. We discourage the use of FACCTS funds to support travel to France by senior Chicago faculty members. However, bringing researchers from France to Chicago, and supporting travel by students, and junior faculty members/researchers in either direction is considered a particularly appropriate use of FACCTS funding.
